

“ HEAVY HITTER - METRIC ”

Ground Mount - Reboundable - Bollard

Model #: TD5428M

TD5428M Bollard, the Heavy Hitter, is ideal anywhere a visible deterrent is required, including bike lanes, parking lots, bus lanes, center medians, pedestrian walkways and transit hubs.

Bollards are designed to provide a visual indicator or deterrent that will help to shape traffic flow, define perimeters, calm traffic and can help separate pedestrians and bicycles from motorized traffic.

Two 4 inch bands of reflective sheeting are recessed to protect the sheeting from impacts and provide the highest degree of night time visibility.

Bollard rebounds to upright position after impacts. Tube is made of UV-resistant impact-resistant material with 100% recycled content.

TD5428M is designed to replace other manufacturer's bollards that use metric thread anchors, typically M12-1.75 threads. Before installing please clean out the existing anchor hole of any dirt or debris. It is also recommended to coat the threads with a moisture-displacing grease that will prevent galvanic corrosion, common to metallic anchors.
